

PSC.2

Local control

Enables the user to operate the valve by push buttons and gives access to the parameterisation of PS-AMS intelligent linear and quarter-turn actuators. Additionally, valve position and actuator status are shown in an illuminated display. By using a padlock, unauthorized use is prevented.

For intelligent linear actuators PS-AMS PSL up to 14 kN, the interface is installed instead of the cover of the terminal box. For intelligent quarter-turn actuators PS-AMS PSQ and intelligent linear actuators PSL320-325AMS, the interface is mounted on an external terminal box.

- Valve operation via push buttons
- Indication of valve position
- Easy adaption to the valve and control signals
- Read out of diagnostic values
- Parametrisation

The AMS actuator concept

It is available for linear actuators up to 25 kN and quarter-turn actuators up to 3000 Nm. The system is mature and proven, robust and completely maintenance-free.
